+1 435.362.7428 • siddharth.kumar@sjsu.edu • sidkuma24.github.io

Industry experience working with Full-stack web development using Java SpringBoot and Angular.js. Hands-on experience developing responsive web and mobile applications using Xcode, Android studio and Flutter.

Technical Skills

- **Languages:** Java, C++, Python, R, JavaScript, HTML and CSS
- **Frameworks:** TensorFlow, Keras, Caffe, Numpy, Pandas, Apache Spark, Apache Hive, NodeJS, ReactJS, ExpressJS, Bootstrap.
- **Databases:** MySQL, PL/SQL, MongoDB(NoSQL), Redis.
- **Cloud:** AWS, GCP, Azure, Alicloud, Docker
- **Tools & IDEs:** Apache Maven, Gradle, Jenkins, Grunt, Git, Eclipse, Android Studio, Jira

Education

- **San Jose State University** — **San Jose, CA**
  Master of Science, Computer Science — ***CGPA: 3.72/4.0*** — *Aug 2017– May 2019*
- **Indian Institute of Engineering Science and Technology** — **West Bengal, India**
  Bachelor of Engineering, Computer Science — ***CGPA: 3.52/4.0*** — *Aug 2012– April 2016*

Work Experience

- **Full-stack Development Intern, *Hypergrid Inc., San Jose*** — **June 2018–Present**
  - Developed REST endpoints for several new features in the platforms latest release, making a range of useful features available to the customers.
  - Migrated the Solr dependencies to Postgres to improve application availability and maintainability, reducing memory usage by almost 20%.
  - Optimized the VM provisioning by integrating Redis in-memory caching, substantially speeding up the data intensive operations.
  - Integrated machine learning based VM recommendation engine to the platform, makes VM configuration recommendations based on user requirements, reducing the usage cost.

  Technologies: ***Java, Springboot, Gradle, JavaScript, Angular JS, Python, PostgreSQL, RESTFul web services***
- **Application Developer, *Accenture, India*** — **August 2016–May 2017**
  - Enhanced and maintained enterprise Java applications in Spring MVC and AngularJS.
  - Designed scripts for automated reporting of product data using Python and Shell scripting, substantially reduced the time needed for generating reports previously completed manually.
  - Contributed to the development of Accenture Automatic Ticket Resolver, aimed at reducing the average issue resolution time to 2 hours

  Technologies: ***Java, JavaScript, Angular JS, JQuery, Shell Scripting, Python, Maven, PL/SQL, RESTFul web services***
- **Undergraduate Research Intern, *Indian Institute of Technology, Patna, India*** — **May 2015–July 2015**
  - Created an aspect-based sentiment classifier for online user reviews. More fine-grained sentiment analysis, giving the review for each aspect in a review.
  - Developed models for automatic extraction and classification of aspect terms and sentiments using both Conditional Random Field (CRF) and Support Vector Machines (SVM).

  Technologies: ***Java, Shell Scripting, Machine Learning, Support Vector Machines.***

Notable Projects

- **Faster R-CNNs with Modified Region Sampling**
  - Implemented Faster R-CNN framework using TensorFlow and tested it on Pascal VOC 07, 12 and MS COCO datasets.
  - Proposed modifications to the region proposal method, which slightly improved the mAP during testing.

  Technologies: ***Python, TensorFlow, Deep Learning, Convolutional Neural Network, Deep Residual Networks***
- **Movie Recommendation System using Spark**
  - Build an application for providing personalized movie recommendations using Spark MLlib.
  - Used Alternating Least Squares trained on the MovieLens dataset.
  - Implemented a REST API in Flask to build a scalable model.

  Technologies: ***Python, Apache Spark, Flask, Collaborative Filtering***
- **Distributed Convolutional Neural Network using TensorFlow**
  - Implemented deep convolutional neural networks in TensorFlow for distributed training.
  - Trained and tested the model using the CIPAR-10 dataset for building an image classifier.
  - Parallel distributed training on several nodes of much faster training on deep models

  Technologies: ***Python, TensorFlow, Deep Learning, Convolutional Neural Network***
